Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

- (Currently Amended) A container that supplies a source of fuel to a direct methanol fuel cell, the container comprising:
- a housing, the housing <u>defining a fixed interior space</u> having at least a portion of a wall of the housing being comprised of a thermally conductive material;
 - a fuel egress port supported by the housing; and
- a surface area enhanced planar vaporization membrane <u>disposed in the housing of</u> residing in the container, with the surface area enhanced planar vaporization membrane and a <u>substantial fixed portion of the fixed interior space of the housing confining and being in direct contact with a liquid source of an oxidizable fuel, and the egress port delivering the oxidizable fuel in a vapor phase.</u>
- (Original) The container of claim 1 wherein the surface area enhanced planar vaporization membrane is a polymer membrane.
- (Original) The container of claim 1 wherein the at least a portion of a wall of the housing being comprised of a thermally conductive material is comprised of a metal.
- (Currently Amended) The container of claim 1 wherein remaining portions of walls of the eontainer housing are thermally insulating.
- 5. (Original) The container of claim 1 wherein the at least a portion of a wall of the housing being comprised of a thermally conductive material is a portion of the housing of the container disposed adjacent the fuel egress port of the container.

6. (Original) The container of claim 1 wherein the container is a fuel cartridge.

7. (Previously Presented) The container of claim 6 wherein the cartridge contains the

source of fuel.

8. (Previously Presented) The container of claim 1 wherein the source of fuel is methanol.

9. (Currently Amended) The container of claim 1 wherein the container is a fuel

reservoir.

10. (Previously Presented) The container of claim 1 wherein at least a portion of a wall of

the housing being comprised of a thermally conductive material sinks heat to enhance a delivery

rate of methanol in a vapor phase across the membrane to deliver the vapor at the egress port of

the container.

11. (Currently Amended) A fuel cartridge that supplies a source of fuel to a fuel cell, the

fuel cartridge comprising:

a housing, the housing <u>defining a fixed interior space to confine and to be</u> <u>eontaining</u> and

in direct contact with a liquid source of an oxidizable fuel, the housing having walls that define the fixed interior space and having at least a portion of a one of the walls of the housing being

comprised of a thermally conductive material; and

comprised of a thermally conductive material; and

a fuel egress port supported by one of the walls of the housing of the cartridge with the at

least a portion of a wall of the housing sinking heat generated from external components to

enhance a delivery rate of the liquid source of oxidizable fuel in a vapor phase to the egress port

of the cartridge container.

12. (Previously Presented) The fuel cartridge of claim 11 wherein the liquid is methanol

and the fuel cell is a direct methanol fuel cell.

13. (Currently Amended) The fuel cartridge of claim 11 wherein remaining portions of walls of the eartridge housing are thermally insulating.

- 14. (Original) The fuel cartridge of claim 11 wherein the at least a portion of a wall of the housing being comprised of a thermally conductive material is a portion of the housing of the cartridge disposed adjacent the fuel egress port of the cartridge.
- 15. (Original) The fuel cartridge of claim 11 wherein the at least a portion of a wall of the housing being comprised of a thermally conductive material is comprised of a metal.

Claims 16-19 are canceled.

- 20. (Previously Presented) The container of claim 1 wherein the container is configured for a specific electronic device and the portion of the wall of the housing of the container is configured to be disposed adjacent a heating dissipating element of the electronic device.
- 21. (Previously Presented) The container of claim 1 wherein the container delivers methanol to the fuel egress port.
- 22. (Previously Presented) The container of claim 1 wherein the container is configured for a specific electronic device, the portion of the wall of the housing of the container is configured to be disposed adjacent a heating dissipating element of the electronic device, and the container delivers methanol to the fuel egress port.
- 23. (Previously Presented) The cartridge of claim 11 wherein the fuel cartridge is configured for a specific electronic device, and wherein the portion of the wall of the housing of the cartridge is configured to be disposed adjacent a heat dissipating element of the electronic device.

24. (Previously Presented) The cartridge of claim 11 wherein the fuel cartridge delivers methanol to the fuel egress port.

- 25. (Previously Presented) The cartridge of claim 11 wherein the fuel cartridge is configured for a specific electronic device, the portion of the wall of the housing of the fuel cartridge is configured to be disposed adjacent a heating dissipating element of the electronic device, and the fuel cartridge delivers methanol to the fuel egress port.
- 26. (Previously Presented) The cartridge of claim 11 further comprising: a surface area enhanced planar vaporization membrane residing in the cartridge.
